EOS Ambulance

Manufacture of vehicles with special equipment

Our company, which was established in 2011 for the manufacture of vehicle superstructures, has accomplished many successful works during the time period. Since 2016, it has specialized in the production of ambulances and mobile health vehicles by directing its expertise in vehicle superstructure manufacturing to a specific product. Since 2019, we have decided to carry the experiences we have gained on ambulances and mobile health vehicles in the country to foreign markets.

Various vehicle superstructures (fire engine, vacuum truck, garbage truck, etc.) are still manufactured and sold in other group companies of our company. EOS Ambulance company has started to manufacture and sell ambulances and mobile health vehicles since 2018.

In addition to customer requests and project-based work, our company manufactures and sell the following product groups as standard.

“ We felt the need to professionalize our experience in the production of special equipment vehicles on ambulances and mobile health vehicles.

With this in mind, we created the EOS ambulance brand. We continue to work to offer our valued customers the best quality at the most affordable cost.

FUNERAL TRANSPORT VEHICLE

Panel Van Type Funeral Transport Vehicle

Our Panel Van type funeral transport vehicle can be manufactured to carry 2, 3 and 4 coffins. The left and right and roof coverings of the vehicle are ABS. The shelves on which the coffins are placed are made of reinforced aluminium. The carriers on the shelves have a cylindrical rotating system for easy loading and removal of the coffin. After the coffins are loaded on the shelf, they are locked with a special lock system, ensuring that they remain stable during the movement of the vehicle.

Our funeral transport vehicle is equipped with a special air conditioning system. The part where the coffins are located can be cooled down to -2 degrees in a very short time, at $+30$ degrees outside air temperature. The air conditioning system is independent of the vehicle engine system. Even when the vehicle is not running, the air conditioning system continues to work to keep the indoor temperature at the desired level.
